

NOTICE OF CONSTRUCTION

BLUFFER'S PARK SOUTH HEADLAND AND BEACH MAJOR MAINTENANCE PROJECT PHASE II – HEADLAND LONG-TERM MAINTENANCE WORKS

Toronto and Region Conservation Authority (TRCA), in partnership with the City of Toronto, is undertaking interim maintenance works on an existing erosion control structure in Bluffer's Park.

On April 14-15 2018, the Toronto region experienced a wind storm that caused high wave activity in Lake Ontario. The waves caused significant damage to the south headland in Bluffer's Park by washing large amounts of stone material into the Lake and onto parkland, causing a portion of the headland to collapse. In order to reduce the risk to park users, and to temporarily stabilize the site, interim maintenance was undertaken in the collapsed area from October 2018 to January of 2019. During that time, a long-term solution was developed to address the stability issues for the rest of the headland, and will be implemented as part of Phase II of the project.

This work is tentatively scheduled to commence June 17, 2019, pending the receipt of necessary permits and approvals, and is anticipated to be completed by July 2020.

To ensure public safety, the headland area will be closed for the duration of the work. Other areas of the park required for construction access, including trails within the limits of construction and the beach area, will be closed on weekdays and reopened on the weekend throughout the duration of the work. For your safety, please respect all posted construction signs and stay clear of the work areas and equipment. Your cooperation and patience with this undertaking is appreciated.

If you have any inquiries or are interested in receiving further information related to this project, please contact the Project Manager as indicated below.
