

Notice of Intent

BLACK CREEK TRIBUTARY BEHIND APPLETREE COURT AND SEELEY DRIVE EROSION CONTROL AND SLOPE STABILIZATION PROJECT - PHASE 2

Toronto and Region Conservation Authority (TRCA) recently completed erosion control and slope stabilization works within the Seeley Grenbelt, near Sheppard Avenue West and Keele Street, in the City of Toronto. The purpose of this work was to provide long term protection for residential properties identified to be at risk following the July 8, 2013 severe storm event ('Phase 1').

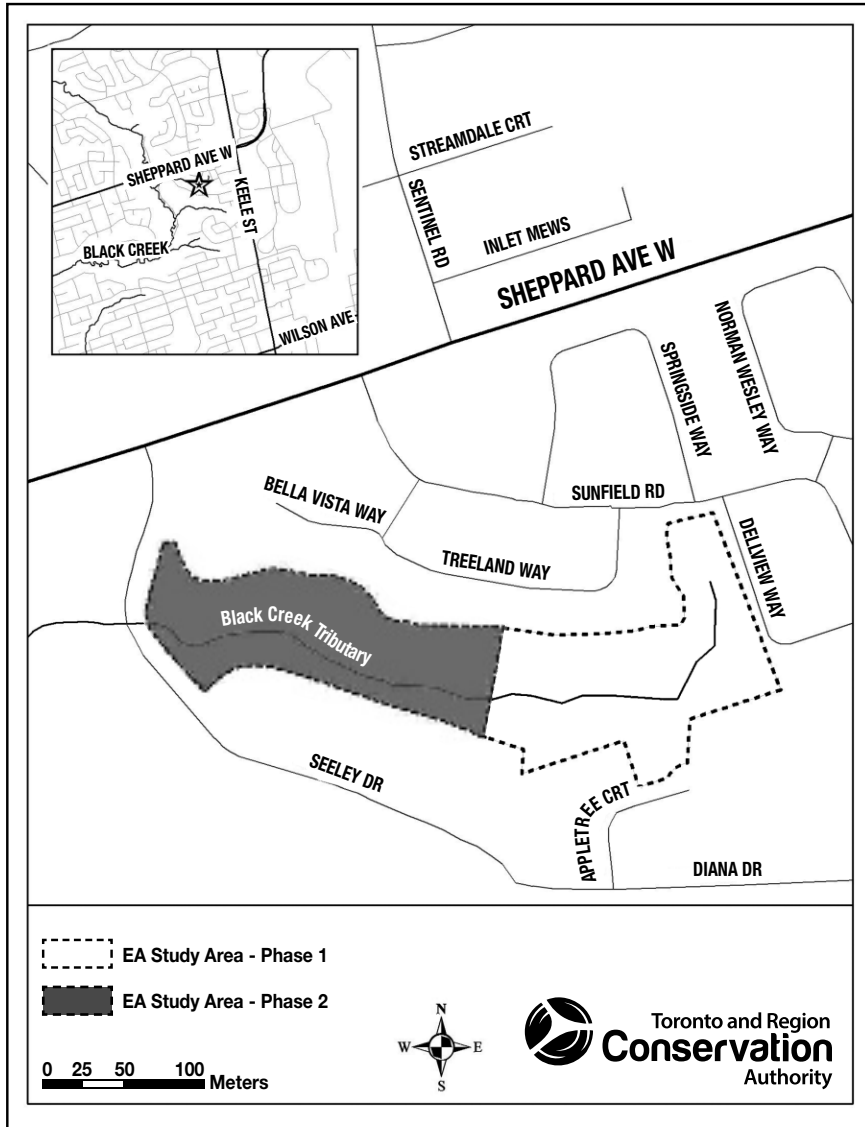

TRCA intends to move forward with planning and design activities for the remainder of the channel ('Phase 2') in order to provide long term, low maintenance protection for residential properties and municipal sanitary sewer infrastructure, within and adjacent to the Phase 2 study limits.

TRCA invites you to participate in this study, which is subject to Conservation Ontario's *Class Environmental Assessment for Remedial Flood and Erosion Control Projects (amended 2013)*, the approved process for this type of undertaking. This planning process includes public and stakeholder consultation, evaluation of alternative solutions, and identification of measures to mitigate adverse impacts related to the proposed undertaking. TRCA welcomes your input in the planning and design.

If you are interested in receiving more information about this project, or if you are interested in being included on future updates in order to provide your input, please contact the Project Manager via one of the methods below:

Courtney Rennie, Project Manager
 Toronto and Region Conservation Authority
 101 Exchange Avenue, Vaughan, Ontario, L4K 5R6
 Phone: 416-661-6600 ext. 5523
 Email: courtney.rennie@trca.on.ca

TRCA intends to proceed with this project pending the receipt of all necessary funding and approvals.
